

# ABHI RAM M S S KOTARI

## DevOps & Site Reliability Engineer

+1 913-325-9459 | ramsrisaikotari@gmail.com | United States

### PROFESSIONAL SUMMARY

DevOps & Site Reliability Engineer experienced in operating and improving highly available, distributed applications across enterprise AWS environments. Skilled in Python automation, CI/CD, infrastructure as code, containerized microservices, observability, and Linux systems, with hands-on experience driving application releases from development through production. Strong background in production troubleshooting, incident response, and cross-functional problem solving across multi-account, multi-region cloud environments.

### PROFESSIONAL EXPERIENCE

#### Cyber Nirvana LLC

Aug 2024 - Present

##### Client: Amtrak | DevOps & SRE

- Supported the migration and production operation of 150+ distributed APIs and microservices across Dev, Test, Stage, and Production, spanning four AWS accounts and two regions per account; provide dedicated DevOps & SRE ownership for five production applications.
- Served as a primary responder for 30+ production incidents, diagnosing distributed-system failures across ECS, API Gateway, VPC Link, Lambda, databases, networking, and application services; contributed to root-cause analysis and corrective actions.
- Drove near-daily application releases through the full delivery lifecycle using Jenkins, AWS CodePipeline, CodeDeploy, ECR, and ECS blue-green deployments; resolved deployment failures, task-definition issues, image-build errors, approval-gate failures, rollbacks, and post-deployment issues.
- Developed and enhanced Python automation for AWS observability migration and validation across multiple accounts and regions, automating checks for CloudWatch activity, Firehose delivery, throttling, S3 backup, data freshness, and Dynatrace ingestion.
- Maintained infrastructure as code with AWS CloudFormation and Terraform to provision and configure ECS, Lambda, API Gateway, IAM, networking, SSM, Secrets Manager, and application infrastructure across multiple environments.
- Operated containerized microservices on AWS ECS/Fargate, troubleshooting task health, service-to-service connectivity, load balancing, container logs, task definitions, image versions, scaling behavior, and blue-green deployments.
- Worked with Docker and Kubernetes for containerized application deployment and orchestration, including pods, deployments, services, configuration, scaling, health checks, and troubleshooting; applied container-orchestration concepts alongside production AWS ECS/Fargate environments.
- Built and maintained application-health monitoring with CloudWatch, Dynatrace, and Elasticsearch/Kibana, using metrics, logs, dashboards, and alerts to identify service degradation, deployment issues, and production reliability risks.
- Diagnosed Linux and distributed-system connectivity issues across AWS environments using SSH, shell scripting, DNS, TCP/IP, HTTP/HTTPS, and TLS, including VPCs, subnets, security groups, routing, VPC endpoints, and ALB/NLB connectivity.

#### Data Science Intern — Exposys Data Labs

Jun 2022 – Aug 2022

- Developed Python/scikit-learn ML models for diabetes prediction, achieving >80% accuracy and ~10% performance improvement.

#### Java Programmer Intern — Suven Consultants & Technology

Apr 2022 – May 2022

- Developed and tested Java/Swing applications including loan-calculation and inventory-management systems.

#### Data Science Intern — 1Stop.ai

Feb 2022 – Mar 2022

- Built Python ML/NLP solutions using clustering, PCA, and chatbot integrations with Slack and Telegram APIs.

### TECHNICAL SKILLS

**Programming & Automation:** Python, Java, Bash/Shell, Groovy, SQL, JavaScript/TypeScript.

**Cloud & Distributed Systems:** ECS Fargate, Lambda, API Gateway, Step Functions, CloudWatch, S3, IAM, ECR, Secrets Manager, SSM, WAF, CodeDeploy, ALB/NLB, VPC Link

**Containers & Orchestration:** Docker, Kubernetes, ECS/Fargate, Containerized Microservices.

**CI/CD & Infrastructure as Code:** Jenkins, GitHub, AWS CodePipeline, CodeDeploy, CloudFormation, Terraform, Blue-Green Deployments.

**Observability & SRE:** Dynatrace, Datadog, CloudWatch, Elasticsearch/Kibana, Metrics, Logging, Dashboards, Alerting, Synthetic Monitoring, Incident Response, RCA, On-Call

**Linux & Networking:** Linux/Unix, SSH, process/resource troubleshooting, VPC, subnetting, routing, security groups, DNS, TCP/IP, HTTP/HTTPS, TLS

### EDUCATION & CERTIFICATION

**M.S., Computer Science** | University of Central Missouri

**B.Tech, Computer Science & Engineering** | JNTU Vizianagaram
